

Das Institut für Optische Technologien lädt ein zum Kolloquiumsvortrag

Functional luminescent lanthanide materials

Prof. Dr. Rik Van Deun

*Department of Inorganic and Physical Chemistry,
Ghent University, Belgium*

The Luminescent Lanthanide Lab (L^3) at Ghent University designs, synthesizes and investigates the properties of luminescent lanthanide-containing materials for a variety of purposes, ranging from lighting, temperature or analyte sensing to anticounterfeiting.

In the talk, an introduction to lanthanides and their luminescence will be given, followed by a few specific systems that have been studied in the L^3 group. Downshifting/upconversion rare-earth tungstate and molybdate materials will be discussed as white-light emitters and sensors for detection of heavy metals; rare-earth functionalized metal-organic frameworks will be shown to have temperature and excitation wavelength dependent emission colors, yielding potential as anti-counterfeit materials; and mixed lanthanide polyoxometalates will be considered as potential cryogenic luminescent thermometers.
